

Interview with Dr. Myron Hall Facebook Live

Dr. Myron Hall, MLK Community Healthcare Podiatrist, did a recent Facebook Live where he shared information on the unique and innovative Wound Healing and Hyperbaric Center in South Los Angeles.

The center has two hyperbaric chambers that help patients with hard-to-heal and non-healing wounds to heal faster. The chambers generate 100% oxygen that skin absorbs.

This is very important for wound healing. The oxygen delivers nutrients to the wound that it needs to heal.

Diabetics

Diabetic patients are at very high risk for peripheral vascular disease, which in many cases, decreases their ability to feel sensations.

If you are diabetic, you should have regular foot exams every three to six months with a podiatrist or your primary care physician.

Hyperbaric oxygen therapy treatment at our center

Medicare covers MLKCH's hyperbaric oxygen (HBO) therapy, but there are certain conditions that the patient must meet. Deeper wounds that have bone infections, wounds that have been treated with intravenous antibiotics, or wounds treated via surgery qualify.

There is no waiting list for MLKCH's hyperbaric oxygen (HBO) therapy. Call us for a referral or more information at (424) 242-0732.

Each therapy session lasts two hours and the center conducts sessions Monday through Friday.

For a referral or more information, please call (424) 242-0732.
